

Authentication & User Management

> Relevant source files

This document covers the authentication system and user management functionality in the MKTY Smart Healthcare System frontend application. It details user login, registration, profile management, and access control mechanisms.

For backend API implementations of these features, see [Core API Endpoints](#). For database schema and user data models, see [Database & Data Management](#).

System Overview

The authentication and user management system provides secure user access and comprehensive profile management for the MKTY platform. The system supports three user types with role-based permissions and includes both desktop and mobile interfaces.

Core Components

Component	Purpose	File Location
Login System	Desktop user authentication	frontend/src/components/modules/Login.vue
Mobile Login	Mobile-optimized authentication	frontend/src/components/modules/LoginMobile.vue
Registration	New user account creation	frontend/src/components/modules/Register.vue
Personal Profile	User profile management	frontend/src/components/modules/PersonalPage.vue

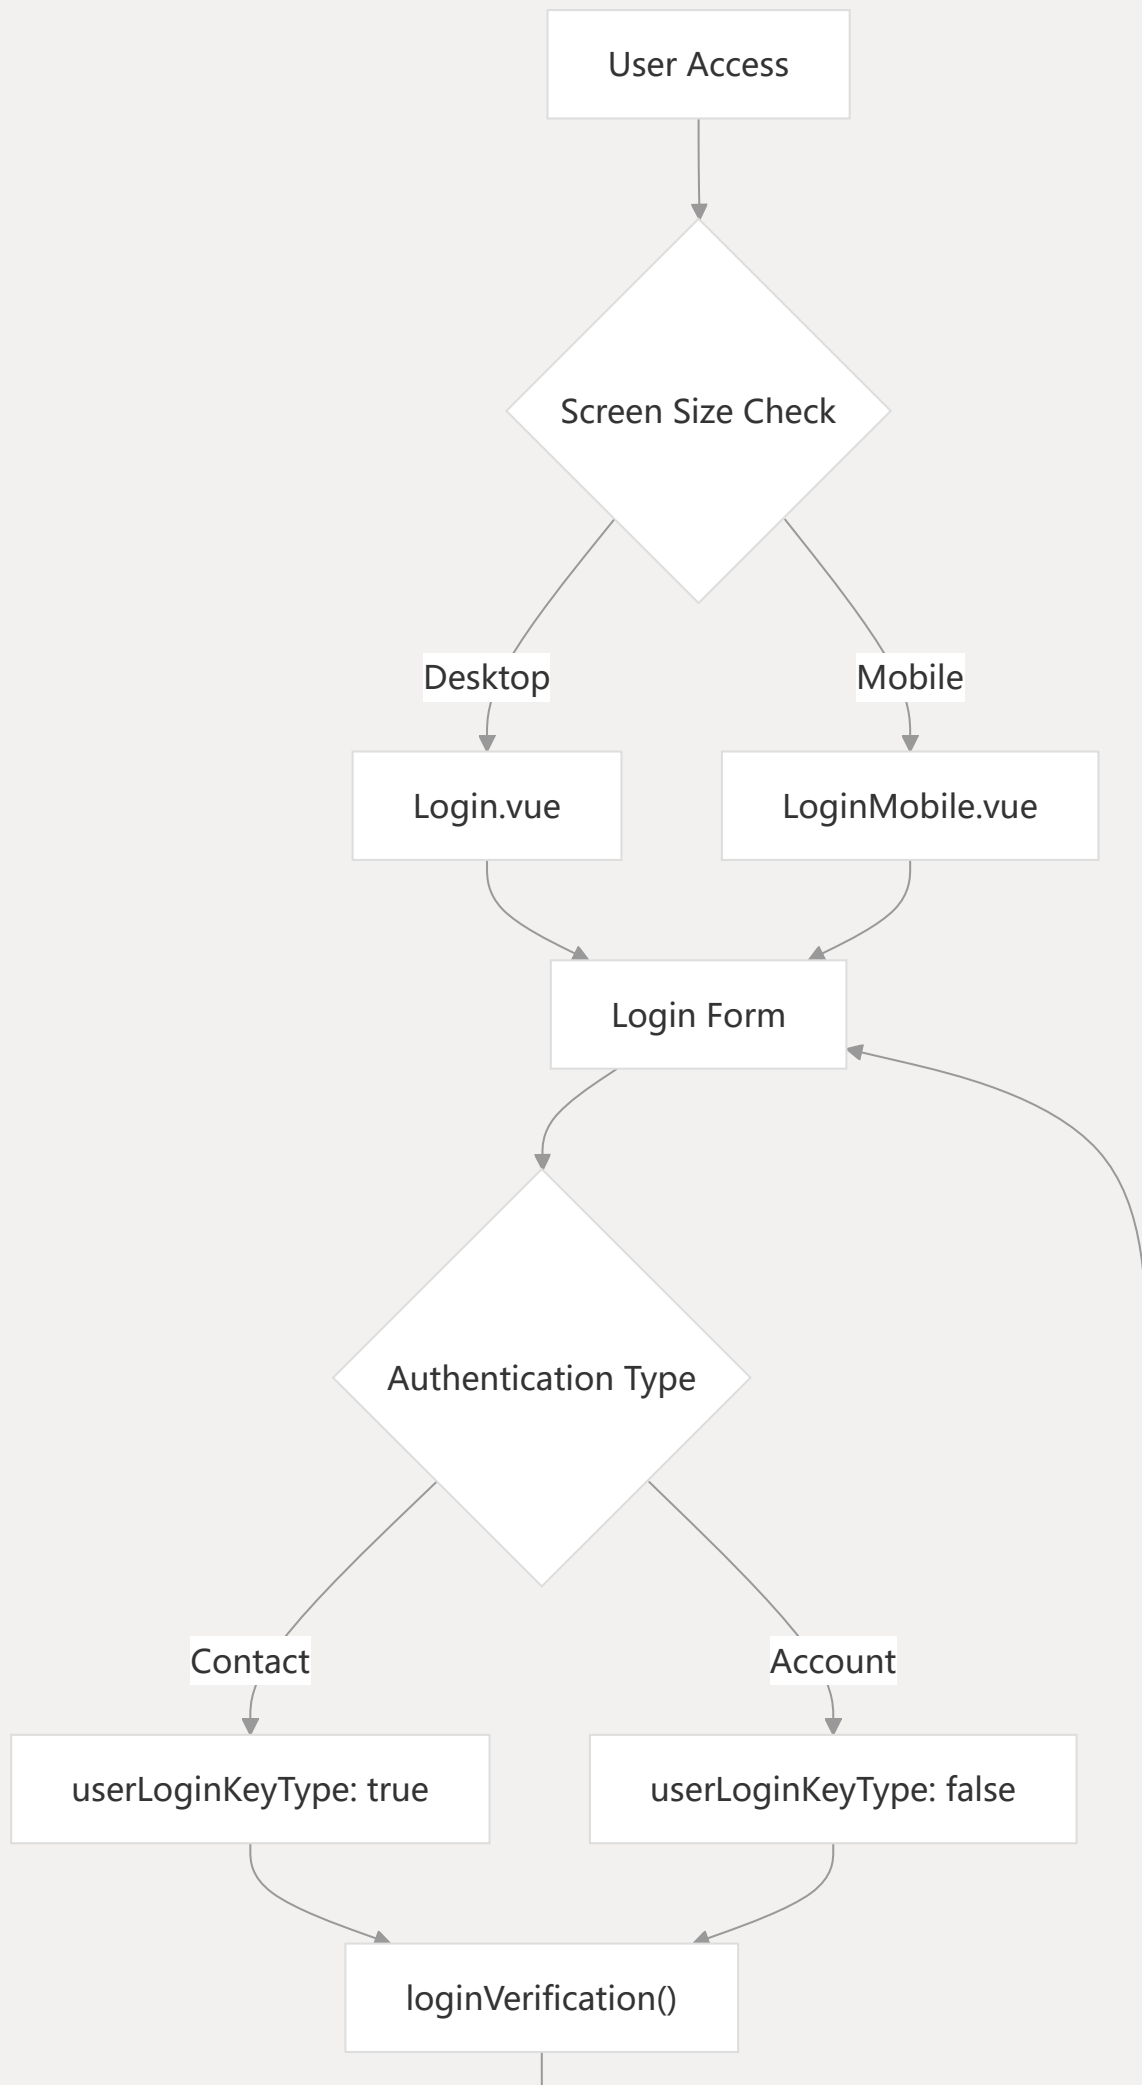

User Types and Roles

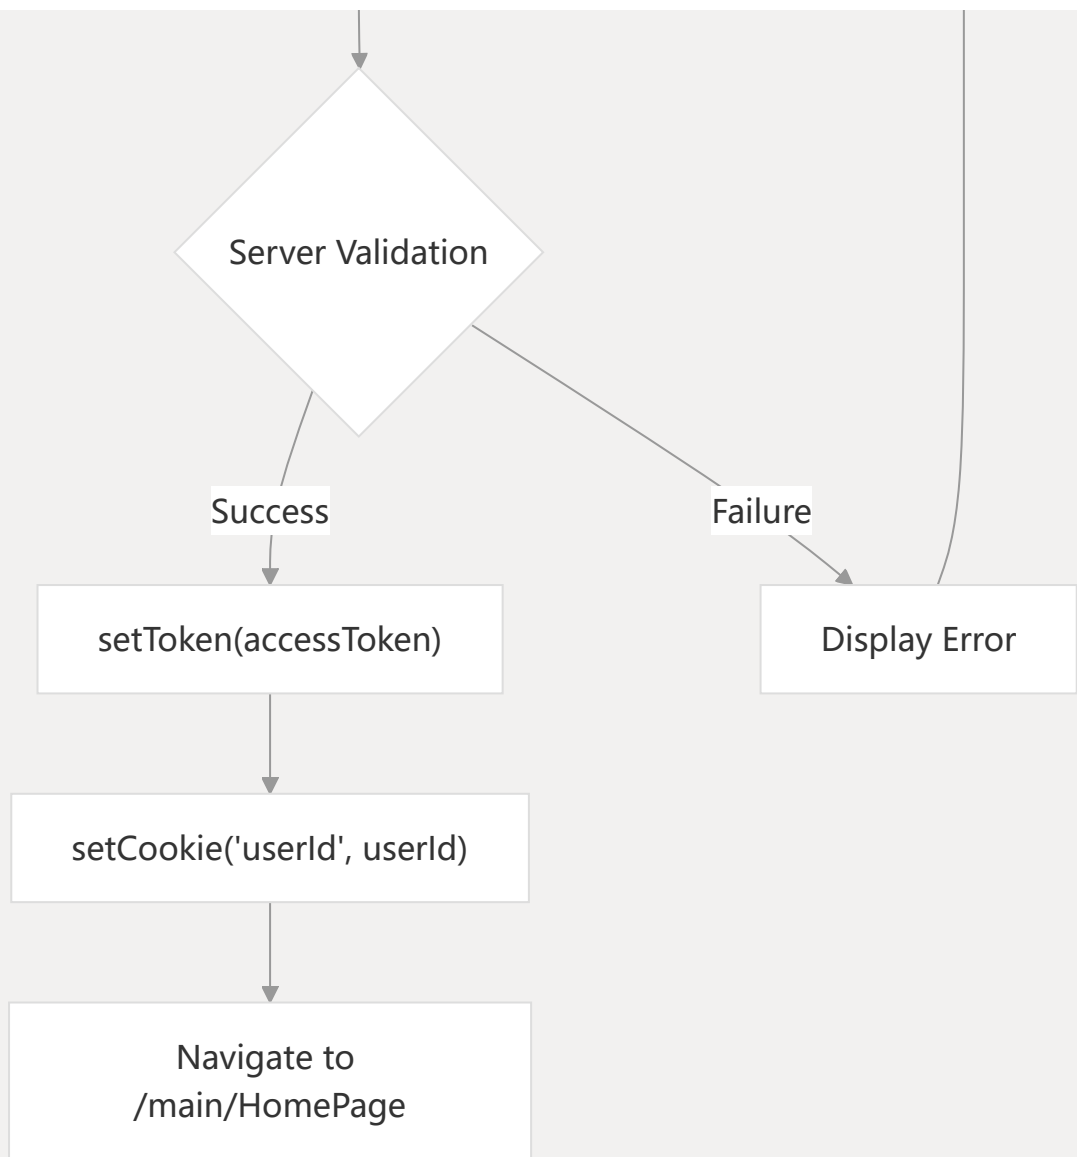

The system defines three distinct user types with specific access privileges:

- Type 0 (患者/Patient):** Standard users seeking medical consultation
- Type 1 (医师/Doctor):** Medical professionals with extended forum access
- Type 2 (其他人员/Other Personnel):** Administrative or support staff

Authentication Flow

Login Process

User Profile Management

Profile Information Structure

The user profile system manages comprehensive user data with privacy controls:

Sources: frontend/src/components/modules/PersonalPage.vue 17-74

frontend/src/components/modules/Register.vue 16-37

Profile Data Access Control

Privacy permissions control information visibility:

Permission	Value	Access Level
Public	0	Visible to all registered users
Private	1	Visible only to profile owner
