

Administration System

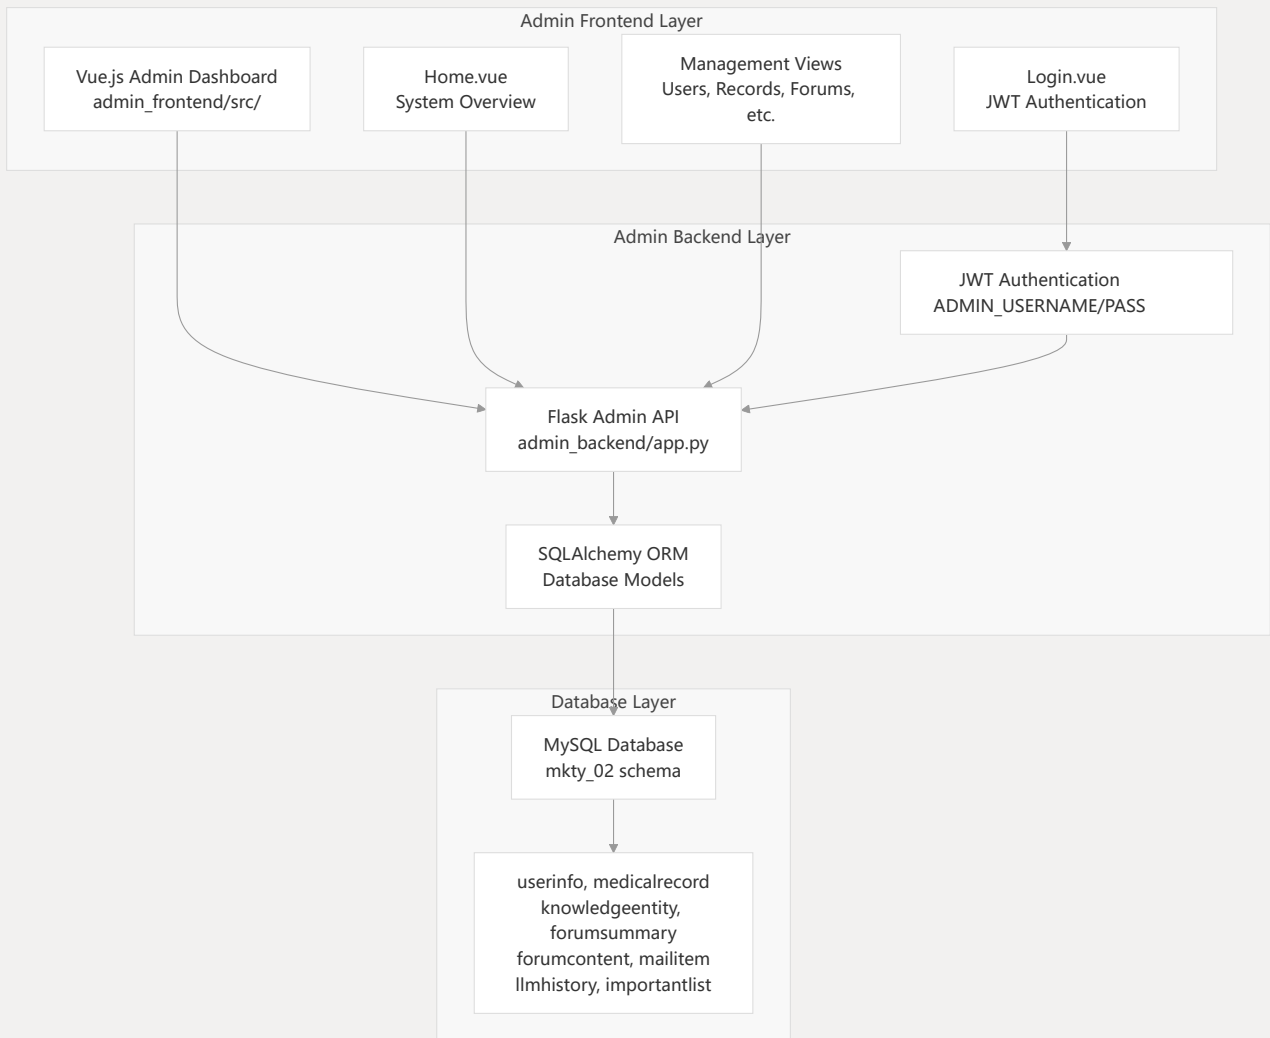

> Relevant source files

The Administration System provides a comprehensive management interface for the MKTY Smart Healthcare System. It consists of a Flask-based backend API with SQLAlchemy ORM and a Vue.js frontend dashboard, enabling administrators to manage users, medical records, knowledge entities, forums, messages, chat sessions, and task lists.

For information about the main system backend services, see [Backend Services](#). For details about the primary user-facing application, see [Frontend Application](#).

Architecture Overview

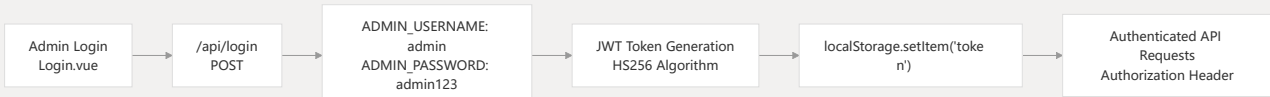

The Administration System operates as a separate administrative layer built on top of the main system's database, providing full CRUD operations for all system entities through a dedicated web interface.

admin_frontend/src/views/Home.vue 1-204

Authentication & Security

The administration system uses JWT-based authentication with hardcoded administrator credentials for secure access to management functions.

Data Models & API Endpoints

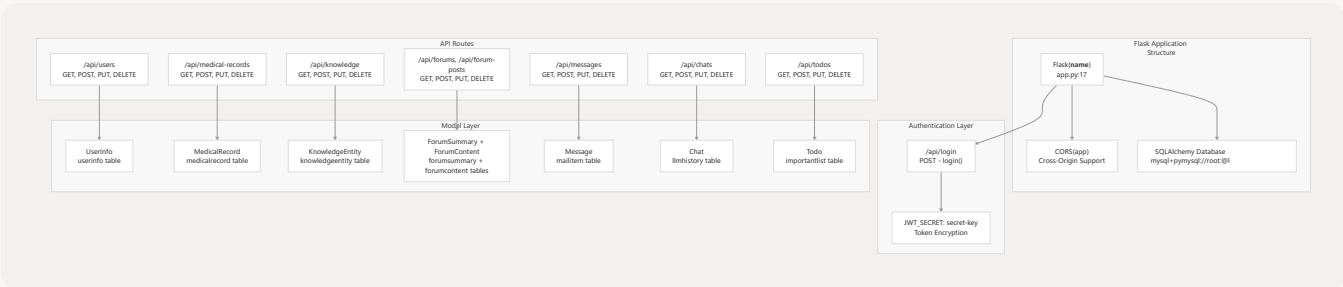

The administration system provides full CRUD operations for all major system entities through RESTful API endpoints.

Entity	Model Class	API Endpoints	Management View
Users	UserInfo	/api/users	UserManagement.vue
Medical Records	MedicalRecord	/api/medical-records	MedicalRecords.vue
Knowledge	KnowledgeEntity	/api/knowledge	Knowledge.vue
Forums	ForumSummary	/api/forums	Forum.vue
Forum Posts	ForumContent	/api/forum-posts	Forum.vue
Messages	Message	/api/messages	Messages.vue
Chat Sessions	Chat	/api/chats	Chat.vue
Todo Items	Todo	/api/todos	TodoList.vue

Key Management Features

System Overview Dashboard

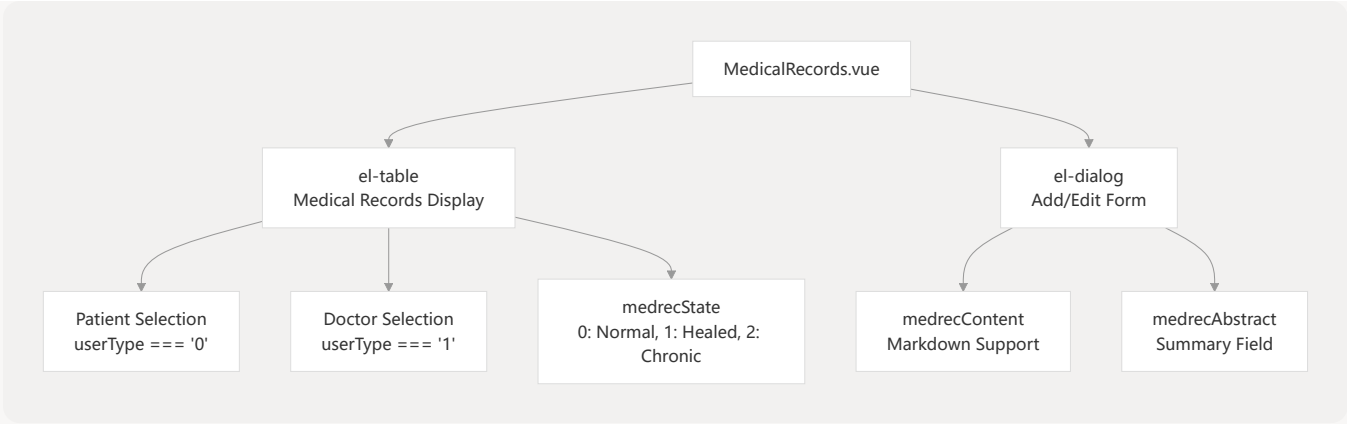

The `Home.vue` component provides real-time statistics and system monitoring capabilities.
