

Admin Backend API

> Relevant source files

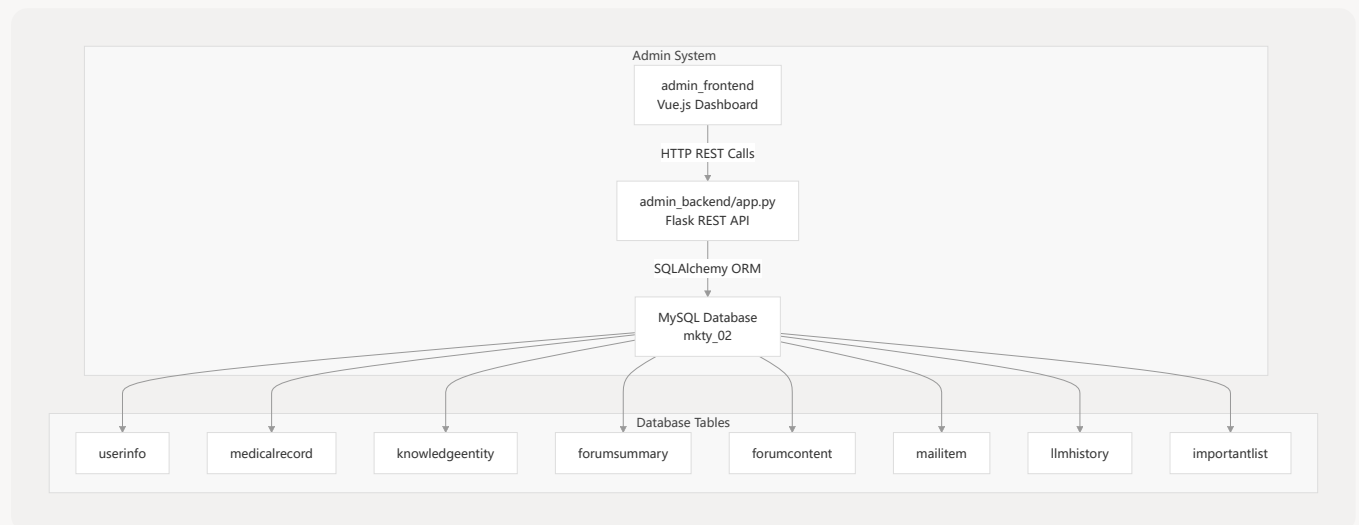

The Admin Backend API provides administrative REST endpoints for managing the MKTY Smart Healthcare System. This Flask-based service enables CRUD operations on system data including users, medical records, forums, knowledge entities, and system messages through a centralized administrative interface.

For information about the main application backend APIs used by end users, see [Core API Endpoints](#). For the administrative frontend interface that consumes this API, see [Admin Frontend Interface](#).

Architecture Overview

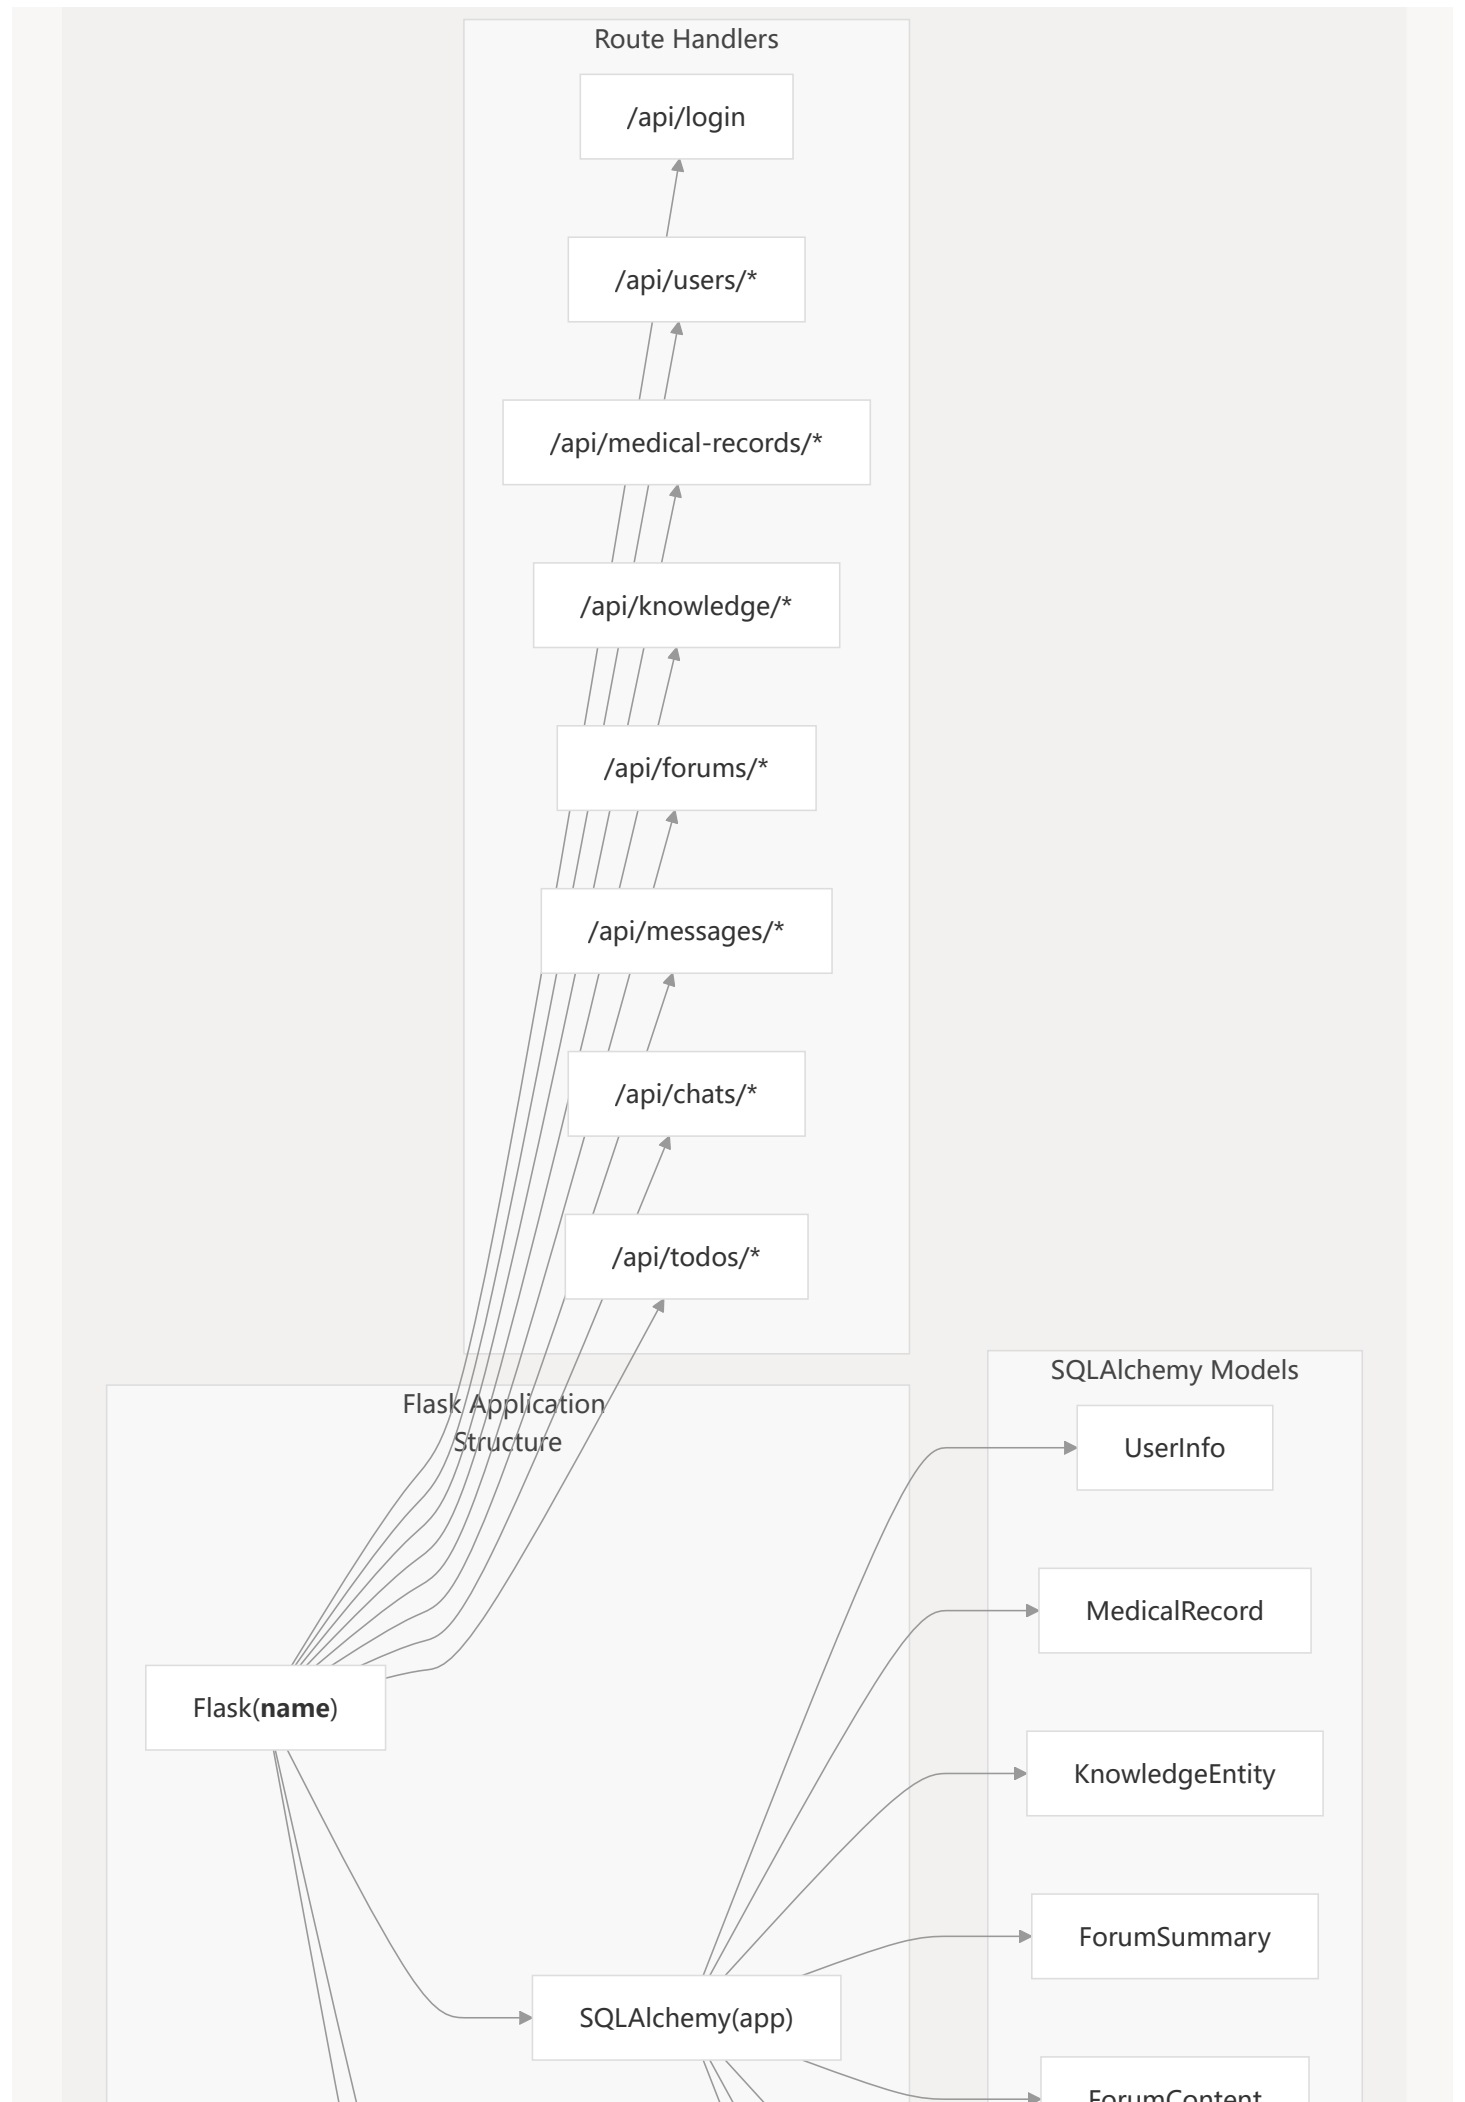

The Admin Backend API serves as the administrative data management layer, providing a separate service from the main application backend for system administration tasks.

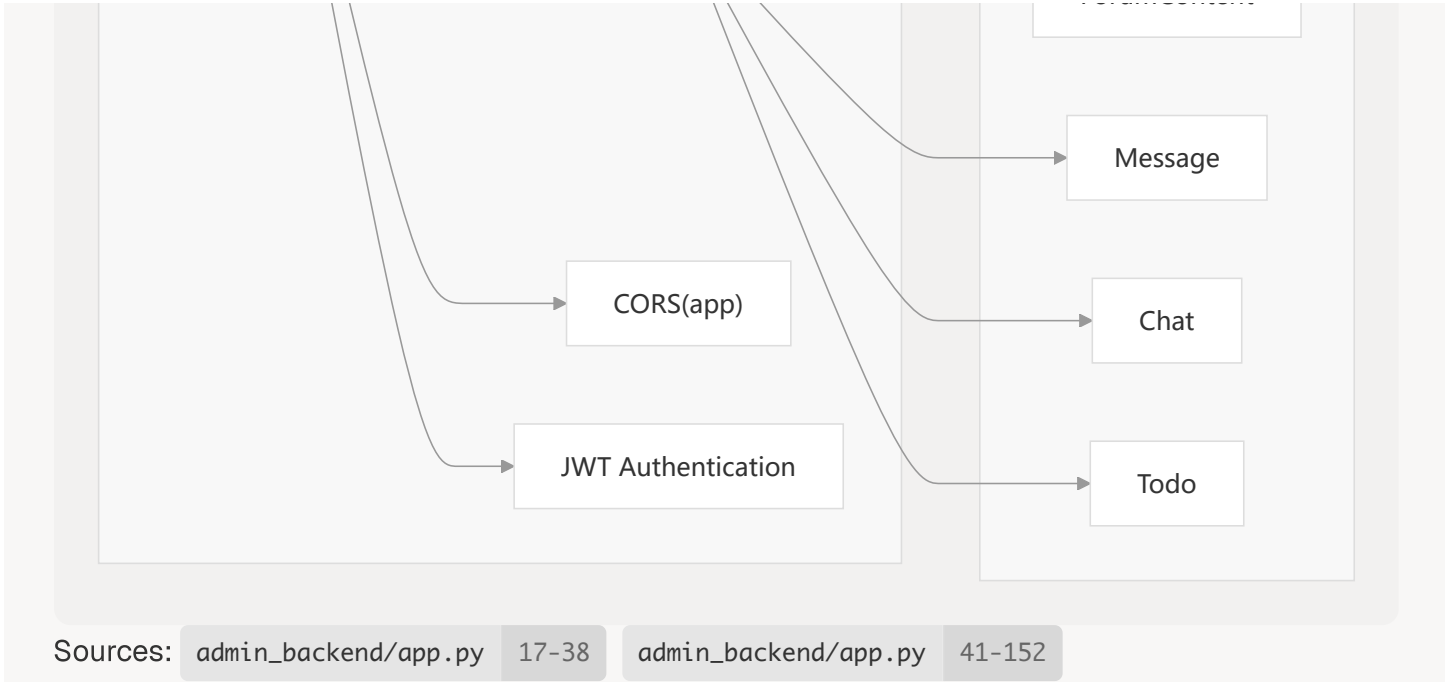

System Components

Core Service Architecture

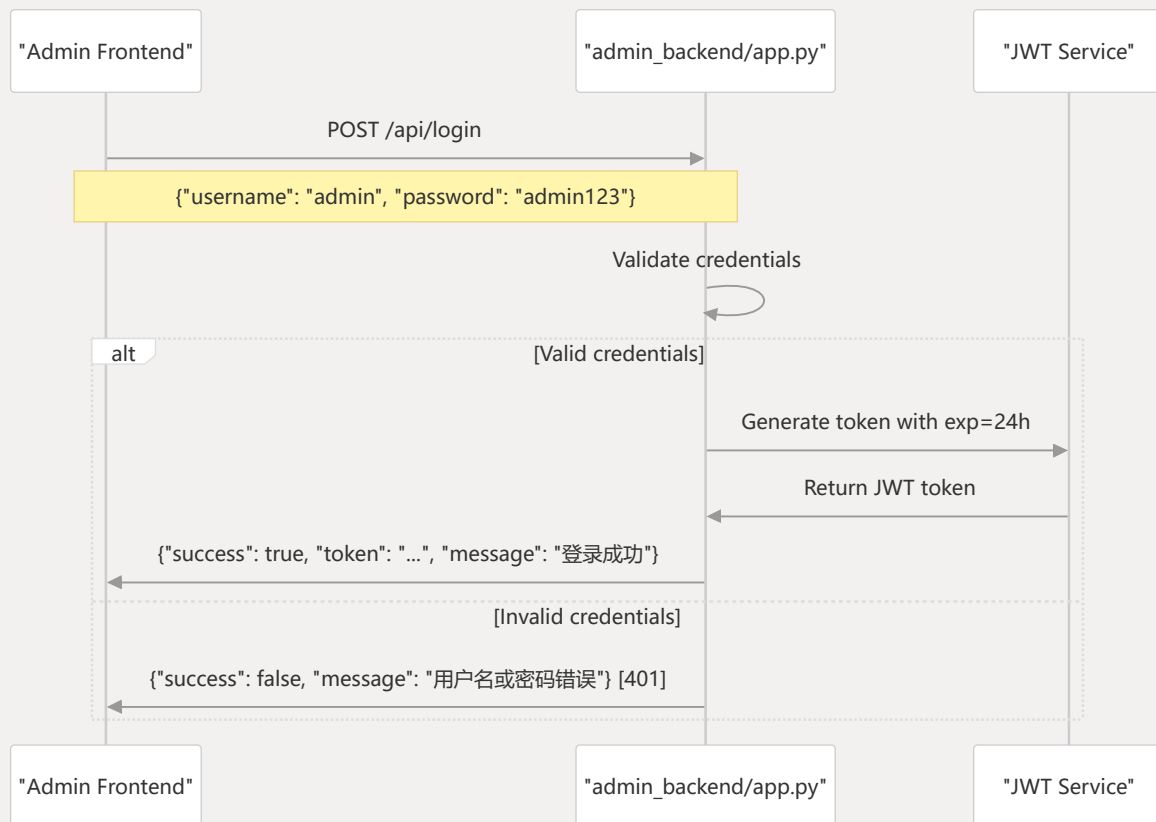

Authentication System

The Admin Backend API uses JWT-based authentication with hardcoded administrative credentials for system access control.

Authentication Configuration

Component	Value	Location
Admin Username	<code>admin</code>	<code>admin_backend/app.py</code> 20
Admin Password	<code>admin123</code>	<code>admin_backend/app.py</code> 21
JWT Secret	<code>secret-key</code>	<code>admin_backend/app.py</code> 22
Token Expiry	24 hours	<code>admin_backend/app.py</code> 164

Login Flow

Data Models

The Admin Backend API manages eight primary entity types through SQLAlchemy ORM models that map to the main system database.

Core Entity Models

Model Class	Database Table	Primary Key	Purpose
<code>UserInfo</code>	<code>userinfo</code>	<code>userId</code>	User account management
<code>MedicalRecord</code>	<code>medicalrecord</code>	<code>medrecId</code>	Medical record administration
<code>KnowledgeEntity</code>	<code>knowledgeentity</code>	<code>keId</code>	Knowledge base content
<code>ForumSummary</code>	<code>forumsummary</code>	<code>forumId</code>	Forum management
<code>ForumContent</code>	<code>forumcontent</code>	<code>postId</code>	Forum post administration
<code>Message</code>	<code>mailitem</code>	<code>messageId</code>	User message management
<code>Chat</code>	<code>llmhistory</code>	<code>chatId</code>	LLM conversation history
<code>Todo</code>	<code>importantlist</code>	<code>todoId</code>	Task list management

User Information Model

UserInfo		
BigInteger	userId	PK
Text	userCiphertext	
Text	userName	
Text	userType	
Boolean	userSex	
Boolean	userSexPermission	
Text	userAge	
Boolean	userAgePermission	
Text	userFrom	
Boolean	userFromPermission	
Text	userContact	
Boolean	userContactPermission	
Text	userDescription	
Text	patientImportantInfo	
Text	doctorImportantInfo	

	.	
Boolean	userImportantInfoPermission	
Text	userAvatarId	
BigInteger	userRegisterTime
