

Admin Frontend Interface

> Relevant source files

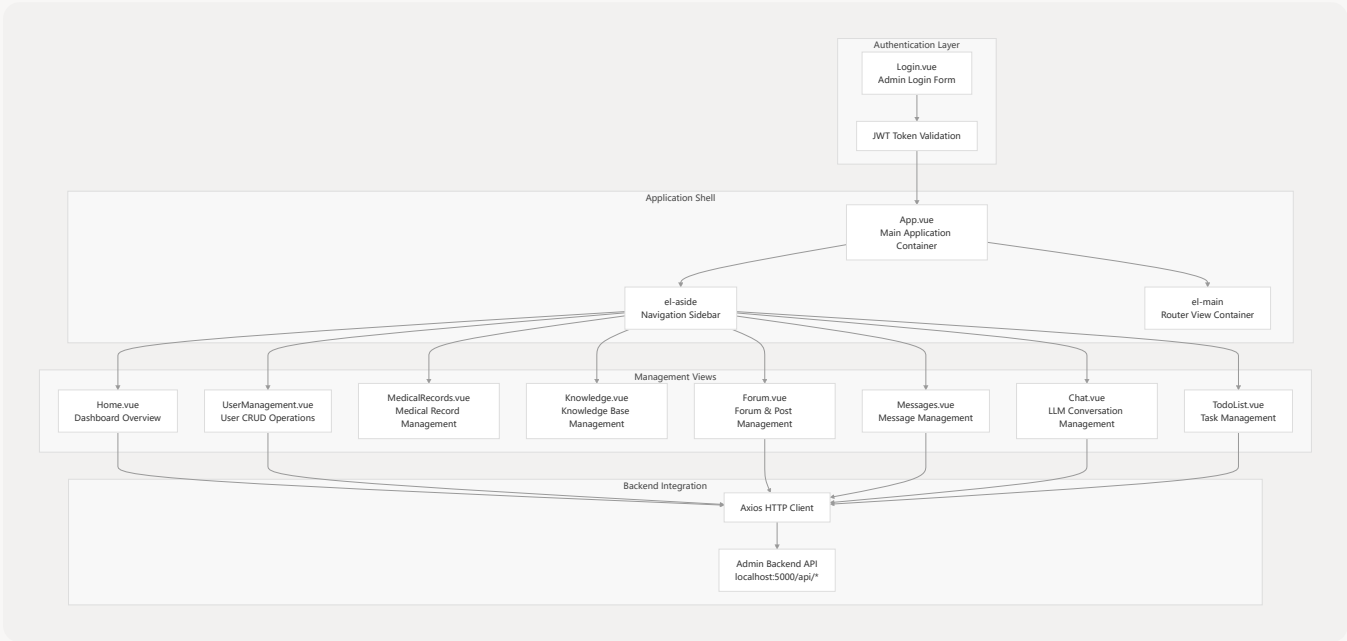

This document covers the Vue.js administrative frontend interface for the MKTY Smart Healthcare System. The admin interface provides system administrators with tools to manage users, medical records, forum content, knowledge base entries, and other system data through a web-based dashboard.

For information about the admin backend API that this frontend communicates with, see [Admin Backend API](#). For details about the main user-facing frontend application, see [Frontend Application](#).

Application Architecture

The admin frontend is built as a single-page application (SPA) using Vue 3 with Element Plus UI components. The application follows a modular structure with dedicated views for different administrative functions.

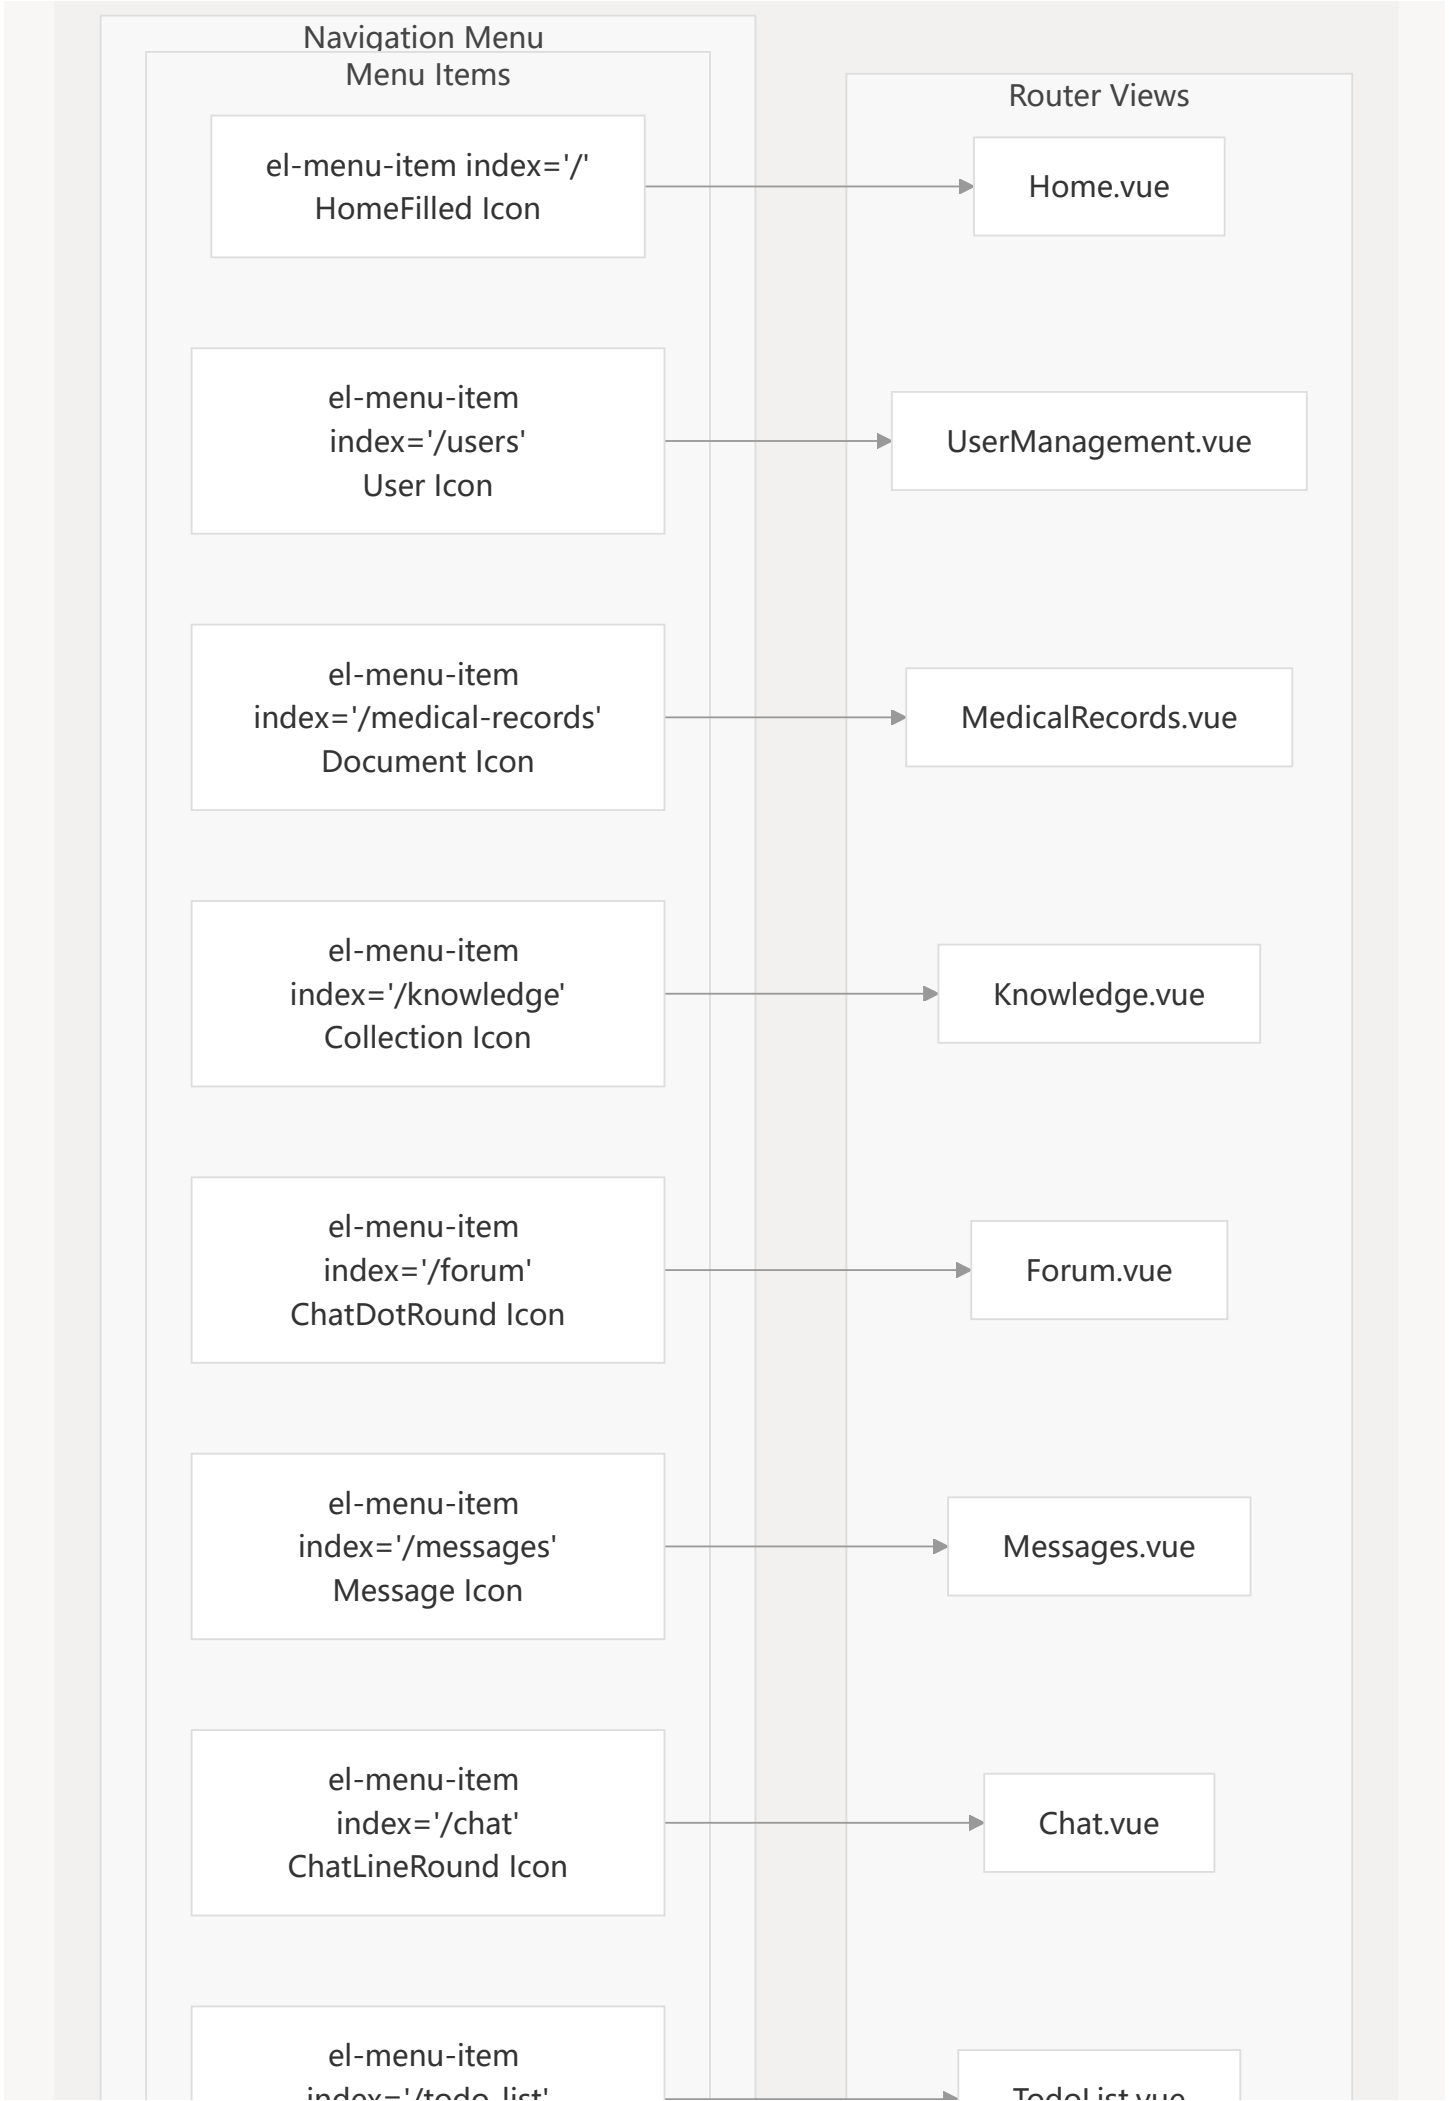

Core Application Structure

Navigation System

The main navigation is implemented through an Element Plus menu component that integrates with Vue Router. The sidebar provides access to all major administrative functions.

Management Modules

Dashboard Overview

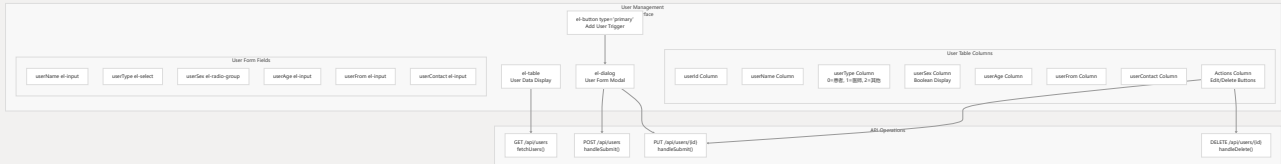

The `Home.vue` component provides a system overview dashboard displaying key metrics and statistics. It fetches data from multiple API endpoints to present summary cards.

Metric	API Endpoint	Display Component
User Count	<code>/api/users</code>	<code>el-card</code> with User icon
Medical Record Count	<code>/api/medical-records</code>	<code>el-card</code> with Document icon
Knowledge Count	<code>/api/knowledge</code>	<code>el-card</code> with Collection icon
Forum Post Count	<code>/api/forum-posts</code>	<code>el-card</code> with ChatDotRound icon
Message Count	<code>/api/messages</code>	<code>el-card</code> with Message icon
Chat Count	<code>/api/chats</code>	<code>el-card</code> with ChatLineRound icon
Todo Count	<code>/api/todos</code>	<code>el-card</code> with List icon
