

Assets & Resources

> Relevant source files

This document covers the static assets, demo files, branding materials, and resource files used throughout the MKTY Smart Healthcare System. This includes logos, sample medical images, institutional branding, and other media assets that support the user interface and demonstration capabilities.

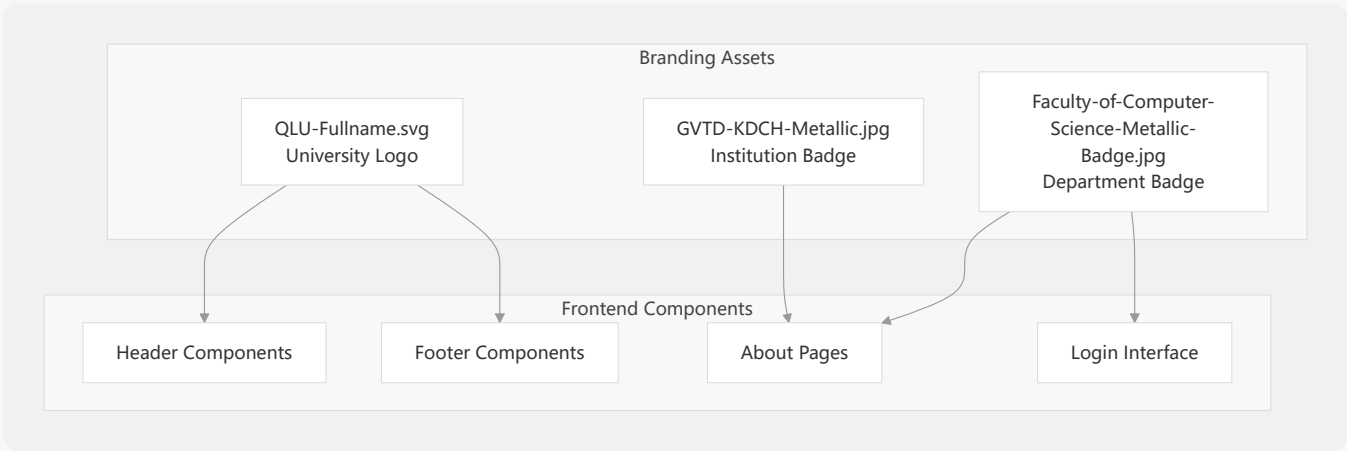

For information about system configuration files and deployment resources, see [Deployment & Configuration](#). For details about the file storage architecture used by the backend services, see [Database & Data Management](#).

System Branding Assets

The MKTY system incorporates several institutional and organizational branding elements that are used across the frontend interfaces and administrative components.

Institutional Logos and Badges

The system includes official branding materials from Qilu University of Technology:

Asset Types and Specifications

Asset Type	Format	Usage Context	File Location
University Logo	SVG	Scalable branding	image/QLU-Fullname.svg
Institution Badge	JPEG	Metallic design elements	image/GVTD-KDCH-Metallic.jpg
Faculty Badge	JPEG	Department identification	image/Faculty-of-Computer-Science-Metallic-Badge.jpg
Demo Medical Image	JPEG	Sample CT scan	backend/demo_CT.jpg

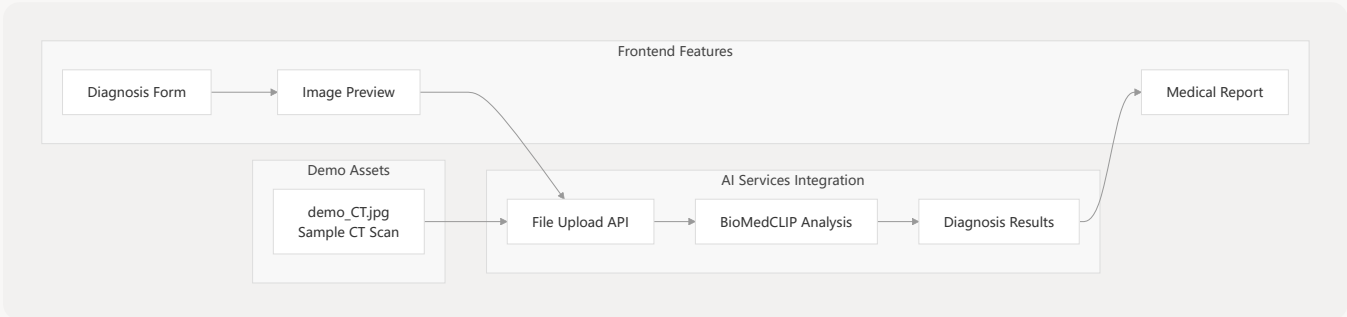

Sources: image/QLU-Fullname.svg:1-3, image/GVTD-KDCH-Metallic.jpg:1-10, image/Faculty-of-Computer-Science-Metallic-Badge.jpg:1-15, backend/demo_CT.jpg:1-5

Demo and Sample Data

The system includes demonstration assets for testing and showcasing medical AI capabilities.

Medical Imaging Samples

The primary demo asset is a CT scan image used for multimodal diagnosis demonstrations:

Sources: backend/demo_CT.jpg:1-100

Demo Data Flow

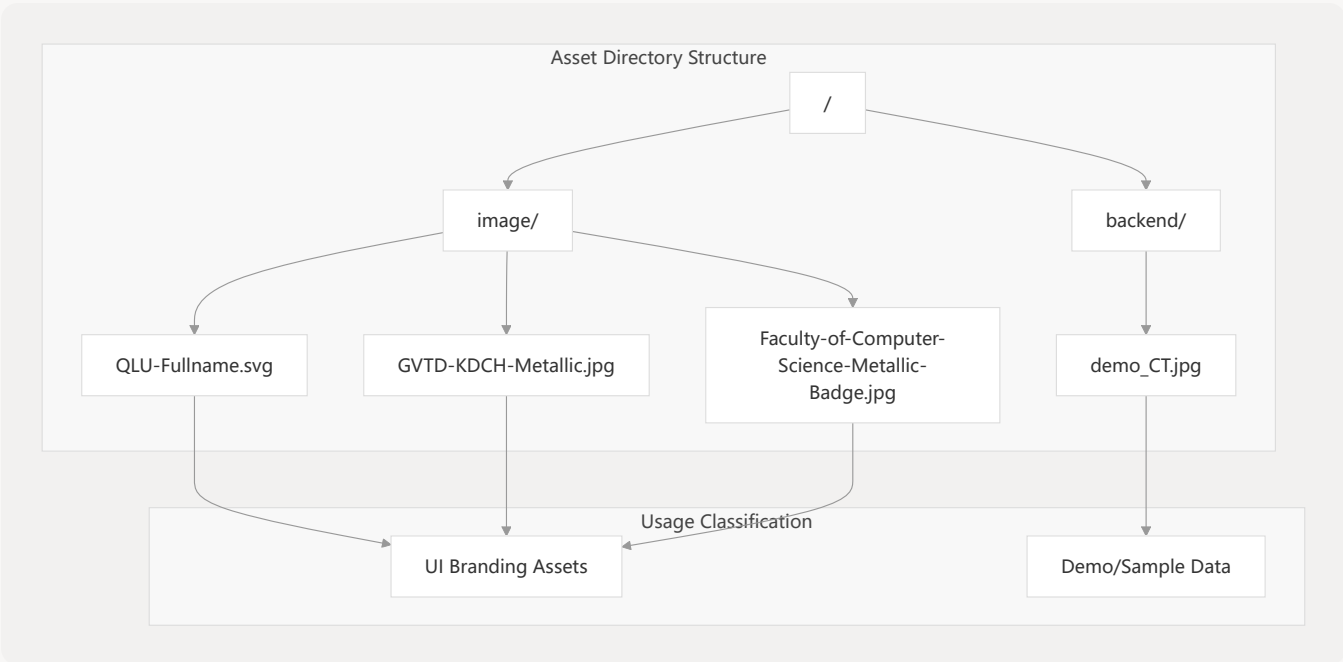

The demo CT scan follows this processing pipeline in the system:

- Upload Phase:** Demo image can be selected through frontend interfaces
- AI Processing:** Image is processed by the BioMedCLIP model via `multimodalDiagnosisSubmitTask` API
- Result Generation:** AI analysis produces probability distributions and recommendations
- Display:** Results are formatted and displayed in the medical records interface

Sources: backend/demo_CT.jpg:1-50

File Organization Structure

The asset files are organized across two main directories reflecting their usage patterns:

Sources: `image/QLU-Fullname.svg:1-1`, `image/GVTD-KDCH-Metallic.jpg:1-1`, `image/Faculty-of-Computer-Science-Metallic-Badge.jpg:1-1`, `backend/demo_CT.jpg:1-1`

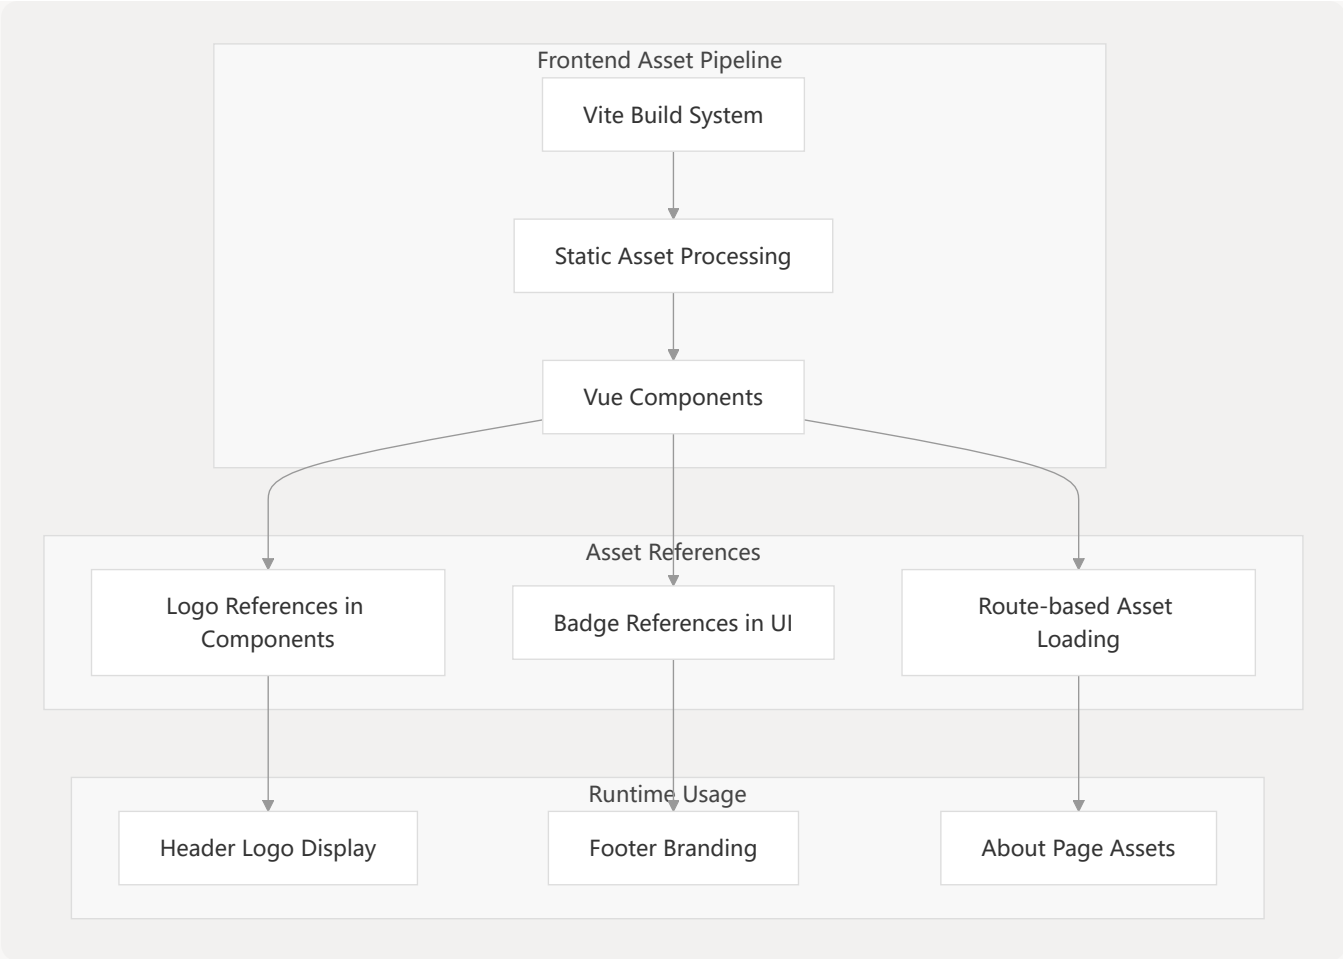

Directory Purposes

- `image/` Directory: Contains branding assets and logos used in the frontend user interface
- `backend/` Directory: Houses demo data and sample files used for testing AI model functionality

Asset Integration Patterns

Frontend Asset Loading

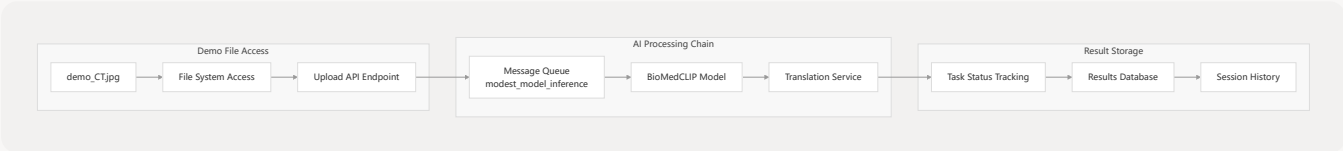

The branding assets are integrated into the Vue.js frontend components through standard image import patterns:

Sources: `image/QLU-Fullname.svg:1-2` , `image/GVTD-KDCH-Metallic.jpg:1-5` , `image/Faculty-of-Computer-Science-Metallic-Badge.jpg:1-8`

Demo Asset Processing

The demo CT scan integrates with the AI services through the multimodal diagnosis pipeline:

Sources: `backend/demo_CT.jpg:1-25`

Asset File Specifications

Image Format Details

The system assets use different formats optimized for their specific use cases:

File	Format	Size Category	Color Profile	Compression
QLU-Fullname.svg	SVG Vector	Scalable	Color	Lossless
GVTD-KDCH-Metallic.jpg	JPEG	Medium	RGB	Lossy
Faculty-of-Computer-Science-Metallic-Badge.jpg	JPEG	Medium	RGB	Lossy
demo_CT.jpg	JPEG	Large	Grayscale	Medical Quality
